# Dwelling—geographic remoteness, classification (ASGS-RA) N

## Identifying and definitional attributes

<b>Metadata item type:</b>	Data Element
<b>Short name:</b>	Geographic remoteness
<b>METEOR identifier:</b>	711262
<b>Registration status:</b>	<a href="#">Housing assistance</a> , Standard 10/05/2019
<b>Definition:</b>	The remoteness of a dwelling, based on the road distance to the nearest urban centre and its population size, as represented by a code.
<b>Data Element Concept:</b>	<a href="#">Dwelling—geographic remoteness</a>
<b>Value Domain:</b>	<a href="#">Remoteness classification (ASGS-RA) N</a>

## Value domain attributes

## Representational attributes

<b>Classification scheme:</b>	<a href="#">Australian Statistical Geography Standard 2016</a>
<b>Representation class:</b>	Code
<b>Data type:</b>	Number
<b>Format:</b>	N
<b>Maximum character length:</b>	1

	<b>Value</b>	<b>Meaning</b>
<b>Permissible values:</b>	1	Major cities of Australia
	2	Inner regional Australia
	3	Outer regional Australia
	4	Remote Australia
	5	Very remote Australia
	6	Migratory
<b>Supplementary values:</b>	9	Not stated/inadequately described

## Collection and usage attributes

**Guide for use:**

Remoteness measures are calculated using Accessibility/Remoteness Index of Australia (ARIA+) scores, which are based on the road distance from a populated locality to the nearest Urban Centre. The lower the ARIA+ score for a populated locality the greater the access to services.

**CODE 1** Major cities of Australia

'Major cities of Australia' includes Statistical Area Level 1s (SA1s) with an average Accessibility/Remoteness Index of Australia (ARIA+) index value of 0 to 0.2.

**CODE 2** Inner regional Australia

'Inner regional Australia' includes SA1s with an average ARIA+ index value greater than 0.2 and less than or equal to 2.4.

**CODE 3** Outer regional Australia

'Outer regional Australia' includes SA1s with an average ARIA+ index value greater than 2.4 and less than or equal to 5.92.

**CODE 4** Remote Australia

'Remote Australia' includes SA1s with an average ARIA+ index value greater than 5.92 and less than or equal to 10.53.

**CODE 5** Very remote Australia

'Very remote Australia' includes SA1s with an average ARIA+ index value greater than 10.53.

**CODE 6** Migratory

'Migratory' is composed of off-shore, shipping and migratory SA1s.

Migratory includes people in transit on long distance trains, buses, aircraft and long haul road transport vehicles on Census night.

Offshore includes people on oil rigs and drilling platforms etc. It is also used for expeditioners in the Australian Antarctic Territory.

Shipping includes people who are on board vessels in Australian waters, in or between Australian ports on Census night.

**Collection methods:**

The list of permissible values for this value domain, i.e. codes 1 to 6, is intended to be directly mappable to the values used by the ABS to describe remoteness areas, i.e. codes 0 to 5, where Code 0 is Major Cities of Australia and Code 5 is Remote Australia.

Information in relation to how remoteness is defined and calculated is available from the Geography portal on the ABS website.

The ARIA+ is provided by the Hugo Centre for Migration and Population Research at the University of Adelaide website.

**Comments:**

The measures of remoteness used by the Australian Bureau of Statistics (ABS) are based on population counts obtained from the Census of Population and Housing, conducted every 5 years.

ARIA+ values range from 0 (high accessibility) to 15 (high remoteness), and is based on road distance measurements from over 12,000 populated localities to the nearest Service Centres in five size categories based on population size.

Prior to 2011, ARIA+ scores were calculated for individual Census Collection Districts (CCDs). Following the phasing out of the Australian Standard Geographical Classification and the introduction of the Australian Statistical Geography Standard (ASGS) by the ABS in 2011, ARIA+ scores are now calculated for individual SA1s.

## Data element attributes

### Collection and usage attributes

**Guide for use:** The remoteness classification of an entity can be derived using characteristics of its physical location, e.g. its postcode or other address details.

### Source and reference attributes

**Submitting organisation:** Australian Institute of Health and Welfare

**Origin:** AIHW. Indigenous community housing national data collection manual 2016-17.

### Relational attributes

**Related metadata references:** Supersedes [Dwelling—geographic remoteness, classification \(ASGC-RA\) N Housing assistance](#), Superseded 10/05/2019

**Implementation in Data Set Specifications:** [Indigenous Community Housing DSS 2018- Housing assistance](#), Standard 10/05/2019

**Implementation start date:** 01/07/2018  
**DSS specific information:**

Record unknown values as 'U' and map to code 9 (not stated/inadequately described).
