Australian Health Performance Framework: PI 3.4.1— Infant and young child mortality rate, 2019

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	AHPF PI 3.4.1—Infant and young child mortality rate, 2019
METEOR identifier:	715307
Registration status:	Health! , Standard 09/04/2020
Description:	Mortality rates for infants and children aged less than 5 years.
Indicator set:	Australian Health Performance Framework, 2019 Health! , Standard 09/04/2020

Collection and usage attributes

Computation: Infants (<1 year old): $1,000 \times (\text{Numerator} \div \text{Denominator})$
Children (0–4 year olds): $100,000 \times (\text{Numerator} \div \text{Denominator})$

Calculated separately for each of the two age groups, and for all Australians, Indigenous and non-Indigenous Australians.

Presented as:

- number of deaths per 1,000 live births (infant)
- number of deaths per 100,000 population (child).

Infant mortality rates: The rates for a single year use single year infant deaths for the numerator, and the number of single year live births for the denominator.

Child mortality rates: The rates for a single year use single year data for the numerator, and the number of single year population for the denominator.

Numerator:

- Number of deaths among infants (aged under 1).
- Number of deaths among children (aged 0–4).

Numerator data elements:

Data Element / Data Set

Person—age at death, NNNN

Data Source

[AIHW National Mortality Database](#)

Guide for use

Data source type: Administrative by-product data

Denominator:

- Number of live births (infant)
- Population aged 0–4 years (child).

Denominator data elements:

Data Element / Data Set

Person—projected Indigenous population of Australia, total people N[N(7)]

Data Source

[ABS Indigenous estimates and projections \(2016 Census-based\)](#)

Guide for use

Data source type: Census-based data plus administrative by-product data
Used for the denominator for the mortality rate for Indigenous children aged 0–4 years.

Data Element / Data Set

[Birth—birth status, code N](#)

Data Source

[ABS birth registration data](#)

Guide for use

Data source type: Administrative by-product data
Used as the main component of the denominator for infant and child mortality rate. Include live births only, i.e. value = 1.

Data Element / Data Set

[Person—estimated resident population of Australia, total people N\[N\(7\)\]](#)

Data Source

[ABS Estimated resident population \(2016 Census-based\)](#)

Guide for use

Data source type: Census based data plus administrative by-product data
Used for the denominator for the mortality rate for children aged 0–4 years.

Disaggregation:

- 2008–2017—National, infants aged under 1.
- 2008–2017—National by sex, children aged 0–4.
- 2008–2017—State and territory by sex, infants aged under 1.
- 2008–2017—State and territory by sex, children aged 0–4.
- 2008–2017—National by Indigenous status and sex, infants aged under 1.
- 2008–2017—National by Indigenous status and sex, children aged 0–4.
- 2011–2017—Primary Health Network, infants aged under 1.
- 2011–2017—Primary Health Network, children aged 0–4.
- 2011–2017—National by remoteness areas (Australian Statistical Geography Standard (ASGS) Remoteness Structure), infants aged under 1
- 2011–2017—National by remoteness areas (ASGS Remoteness Structure), children aged 0–4.

Some disaggregations may result in numbers too small for publication. Disaggregation by Indigenous status will be based on data only from jurisdictions for which the quality of Indigenous identification is considered acceptable—New South Wales, Queensland, Western Australia, South Australia and Northern Territory.

Data Source

[AIHW National Mortality Database](#)

Guide for use

Data source type: Administrative by-product data

Used for disaggregation by state/territory and remoteness

Data Element / Data Set

[Address—statistical area, level 2 \(SA2\) code \(ASGS 2016\) N\(9\)](#)

Data Source

[AIHW National Mortality Database](#)

Guide for use

Data source type: Administrative by-product data

Used for disaggregations by state/territory, Primary Health Network and remoteness areas.

Comments:

Most recent data available for 2019 Australian Health Performance Framework reporting: 2017.

Single year data are reported for time series analysis.

Representational attributes

Representation class:	Rate
Data type:	Real
Unit of measure:	Life event (e.g. birth, death)
Format:	N[NN].N

Indicator conceptual framework
