Product of birth—birthweight, total grams N[NNN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Birthweight of baby
METEOR identifier:	716139
Registration status:	Tasmanian Health, Standard 03/07/2020 Health! , Superseded 03/12/2020
Definition:	The first weight of a live born or stillborn baby obtained after birth, measured in grams.
Data Element Concept:	Product of birth—birthweight
Value Domain:	Total grams N[NNN]

Value domain attributes

Representational attributes

Representation class:	Total				
Data type:	Number				
Format:	N[NNN]				
Maximum character length:	4				
Supplementary values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>9999</td><td>Not stated/inadequately described</td></tr></tbody></table>	Value	Meaning	9999	Not stated/inadequately described
Value	Meaning				
9999	Not stated/inadequately described				
Unit of measure:	Gram (g)				

Data element attributes

Collection and usage attributes

Guide for use: For [live births](#), [birthweight](#) should preferably be measured within the first hour of life before significant postnatal weight loss has occurred. While statistical tabulations include 500 gram groupings for birthweight, weights should not be recorded in those groupings. The actual weight should be recorded to the degree of accuracy to which it is measured.

In perinatal collections, the birthweight is to be provided for live born and stillborn babies.

Implementation in Data Set [Perinatal NMDS 2020–21](#)

Specifications:

[Health](#), Superseded 03/12/2020

Implementation start date: 01/07/2020

Implementation end date: 30/06/2021

DSS specific information:

Weight is an important indicator of pregnancy outcome, is a major risk factor for neonatal morbidity and mortality and is required to analyse perinatal services for high-risk infants.

In the case of multiple births, this data element should be recorded for each baby born.
