Indigenous primary health care: PI24a-Number of regular clients with Type II diabetes whose blood pressure measurement result was less than or equal to 130/80 mmHg, June 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Output measure
Short name:	Pl24a-Number of regular clients with Type II diabetes whose blood pressure measurement result was less than or equal to 130/80 mmHg, 2020–2021
METEOR identifier:	717366
Registration status:	Indigenous, Superseded 14/07/2021 <u>Health!</u> , Retired 13/10/2021
Description:	Number of regular clients who are Indigenous, have Type II diabetes and whose blood pressure measurement result, recorded within the previous 6 months, was less than or equal to 130/80 mmHg.
Rationale:	The blood pressure target for people with Type II diabetes is less than or equal to 130/80 mmHg. This level is shown to significantly decrease macrovascular (stroke, heart attack and heart failure) and microvascular (kidney disease, eye disease and peripheral neuropathy) complications.
Indicator set:	Indigenous primary health care key performance indicators June 2020 Health!, Retired 13/10/2021 Indigenous, Superseded 14/07/2021

Collection and usage attributes

Computation description:	Count of regular clients who are Indigenous, have Type II diabetes and whose blood pressure measurement result, recorded within the previous 6 months, was less than or equal to 130/80 mmHg.
	'Regular client' refers to a client of an Australian Government Department of Health- funded primary health-care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health- care service at least 3 times in 2 years.
	Exclude Type I diabetes, secondary diabetes, gestational diabetes mellitus (GDM), previous GDM, impaired fasting glucose, impaired glucose tolerance.
	The client does not have a blood pressure measurement of less than or equal to 130/80 mmHg if either the systolic or diastolic reading is above the threshold (130 and 80 respectively).
	In the general population, blood pressure over 140/90 mmHg is considered high. The blood pressure target for those with Type II diabetes is less than or equal to 130/80 mmHg as it is shown to significantly decrease macrovascular (stroke, heart attack and heart failure) and microvascular (kidney disease, eye disease and peripheral neuropathy) complications.
	Presented as a number.
	If the client has had more than one blood pressure measurement within the previous 6 months, only the most recently recorded result is included in this calculation.
Computation:	Numerator only

Numerator:	Number of regular clients who are Indigenous, have Type II diabetes and whose blood pressure measurement result, recorded within the previous 6 months, was less than or equal to 130/80 mmHg.
Numerator data elements:	Data Element / Data Set
	Person-diabetes mellitus status, code NN
	Data Source
	Indigenous primary health care data collection
	NMDS / DSS
	Indigenous primary health care NBEDS 2020–21
	Guide for use
	Type II diabetes only.

-Data Element / Data Set-

Person—blood pressure measurement result less than or equal to 130/80 mmHg indicator, yes/no code N

Data Source

Indigenous primary health care data collection

NMDS / DSS

Indigenous primary health care NBEDS 2020-21

Guide for use

Response to this is conditional on responding 'yes' to having had a blood pressure measurement result recorded within the previous 6 months.

– Data Element / Data Set –

Person-Indigenous status, code N
