Person—level of functional independence, Functional Independence Measure score code N

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Level of functional independence (FIM™ score)

METEOR identifier: 717982

Registration status: Health!, Standard 18/12/2019

Tasmanian Health, Standard 06/05/2020

Definition: A person's level of functional independence to carry out activities of daily living

safely and autonomously, as represented by a **Functional Independence**

Measure score-based code.

Data element concept attributes

Identifying and definitional attributes

Data element concept: Person—level of functional independence

METEOR identifier: 680996

Registration status: <u>Tasmanian Health</u>, Standard 19/01/2018

Health!, Standard 25/01/2018

Definition: A person's level of functional independence to carry out activities of daily living

safely and autonomously.

Object class: Person

Property: Level of functional independence

Source and reference attributes

Submitting organisation: Independent Hospital Pricing Authority

Value domain attributes

Identifying and definitional attributes

Value domain: <u>Functional Independence Measure score code N</u>

METEOR identifier: 717979

Registration status: <u>Health!</u>, Standard 18/12/2019

Tasmanian Health, Standard 06/05/2020

Definition: A code set that represents an individual's need for assistance with eighteen

activities of daily living.

Representational attributes

Representation class: Code

Data type: Number

Format: N

Maximum character length: 1

Value Meaning

Permissible values: 1 Total assistance with helper

2	Maximal assistance with helper
3	Moderate assistance with helper
4	Minimal assistance with helper
5	Supervision or setup with helper
6	Modified independence with no helper
7	Complete independence with no helper
9	Not stated/inadequately described

Collection and usage attributes

Guide for use:

Supplementary values:

The <u>Functional Independence Measure</u> (FIM $^{\text{TM}}$) is an instrument which indicates a patient's disability level.

FIM™ is comprised of 18 items, grouped into 2 subscales - motor and cognition.

The motor subscale includes:

- Eating
- Grooming
- Bathing
- Dressing, upper body
- Dressing, lower body
- Toileting
- Bladder management
- Bowel management
- Transfers bed/chair/wheelchair
- Transfers toilet
- Transfers bath/shower
- Walk/wheelchair
- Stairs

The cognition subscale includes:

- Comprehension
- Expression
- Social interaction
- · Problem solving
- Memory

Each item is scored on a 7 point ordinal scale, ranging from a score of 1 to a score of 7. The higher the score, the more independent the patient is in performing the task associated with that item.

CODE 9 Not stated/inadequately described

This code should be used in circumstances where the FIM score code has not been collected. This code is not to be used on FIM score data collection forms.

Data element attributes

Collection and usage attributes

Guide for use: This data element is used to report a score for one of the 18 items that comprise

the Functional Independence Measure instrument. It should be reported in an array of 18 to gain a full (FIM TM) score. The total (FIM TM) score ranges from 18 to 126. If a response to a question within the score contains a value of 9 (not

stated/inadequately described), this should not be included in the calculation of the

total (FIMTM) score.
