Number of myringotomy hospitalisations per 100,000 people aged 17 years and under, 2012-13, 2015-16 and 2017-18

Exported from METEOR (AIHW's Metadata Online Registry)

Number of myringotomy hospitalisations per 100,000 people aged 17 years and under, 2012-13, 2015-16 and 2017-18

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	Myringotomy hospitalisations, 17 years and under, 2012-13, 2015-16 and 2017-18
METEOR identifier:	725734
Registration status:	Australian Commission on Safety and Quality in Health Care, Standard 27/04/2021
Description:	Number of myringotomy hospitalisations per 100,000 people aged 17 years and under, age-sex standardised
Indicator set:	Australian Atlas of Healthcare Variation 2021 Australian Commission on Safety and Quality in Health Care, Standard 27/04/2021

Collection and usage attributes

Population group age from:	17 years and under

Computation description: **Inclusion codes, description and additional requirements**

ACHI (7th, 9th 10th editions) procedure code	Description	Additional requirements
41626-00	Myringotomy, unilateral	Include records with at least one of the listed procedures. A record with more than one of the listed procedures is counted only once.
41626-01	Myringotomy, bilateral	Include records with at least one of the listed procedures. A record with more than one of the listed procedures is counted only once.
41632-00	Myringotomy with insertion of tube, unilateral	Include records with at least one of the listed procedures. A record with more than one of the listed procedures is counted only once.
41632-01	Myringotomy with insertion of tube, bilateral	Include records with at least one of the listed procedures. A record with more than one of the listed procedures is counted only once.

Exclusion codes and description

Care type	Description
7.3	Newborn – unqualified days only
9.0	Organ procurement – posthumous
10.0	Hospital boarder

Rates are directly age-sex standardised, to the 30 June 2001 Australian population aged 17 years and under, using 5-year age groups: 0-4, 5-9, 10-14 and 15-17.Presented as a number of hospitalisations per 100,000 people.

Indigenous and other Australian rates are directly age-sex standardised, to the 30 June 2001 Australian population aged 17 years and under, using 5-year age groups: 0-4, 5-9, 10-14 and 15-17.

Population estimates at 31 December are calclated as an average of the 30 June population estimates before and after the relevant December to derive a midpoint (31 December) population estimate.

For more information about age-standardisation in general see glossary item **Age-standardised rate**.

Analysis by Statistical Area Level 3 (SA3) 2016 is based on:

- Statisitcal Area Level 2 (SA2) 2011 of usual residence of the patient for 2012-13 and 2015-16, converted to SA3 (ASGS 2016) equivalents through an ABS concordance file
- SA2 2016 of usual residence of the patient for 2017-18.

Suppress data (number and rate) if at least one of the following conditions are met:

- the total denominator is less than 1,000
- the total numerator is less than 20.

Age-sex standardised rates are also suppressed where the denominator for at leasat one of the age-sex groups used to calculate the rate is below 30 and results of sensitivity analysis indicate that the rates are volatile. However, for SA3 data, if the volatility of the rate is not found to have a material impact on its decile, the rate is published with caution. For more information about the sensitivity analysis, see the Technical supplement of the Fourth Atlas.

Consequential suppression may be applied to preserve confidentialised data.

Computation:	100,000 × (Numerator ÷ Denominator)
Numerator:	Number of myringotomy hospitalisations, 17 years and under, 2012-13, 2015-16 and 2017–18

Accountability attributes

Methodology:	Statistical Area Level 3 (SA3s) are geographic areas defined in the ABS Australian Statistical Geography Standard (ASGS). The aim of SA3s is to create a standard framework for the analysis of ABS data at the regional level through clustering groups of SA2s that have similar regional characteristics. There are 340 spatial SA3s covering the whole of Australia without gaps or overlaps. They are designed to provide a regional breakdown of Australia. SA3s generally have a population of between 30,000 and 130,000 people. There are approximately 78 with fewer than 30,000 people and 46 with more than 130,000 as at 30 June 2016. The Other Territories of Jervis Bay, Cocos (Keeling) Islands, Christmas Island and Norfolk Island are each represented by a SA3 in the 2016 ASGS. For further information see the ABS publication, Population by Age and Sex, Regions of Australia, 2016.
	The scope of the NHMD is episodes of care for admitted patients in all public and private acute and psychiatric hospitals, free-standing day hospital facilities and alcohol and drug treatment centres in Australia. Hospitals operated by the Australian Defence Force, corrections authorities and in Australia's off-shore territories are not in scope, but some are included.
