Australian Health Performance Framework: PI 1.2.6—Sharing of used needles/syringes, 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	AHPF PI 1.2.6—Sharing of used needles/syringes, 2020
Synonymous names:	Receptive sharing of used needles/syringes by people who inject drugs
METEOR identifier:	728302
Registration status:	Health! , Standard 13/10/2021
Description:	The proportion of people who inject drugs who attend Needle-Syringe Programs (NSP), and who reported re-using someone else's used needles/syringes in the previous month, based on the 1995—2019 Australian Needle Syringe Program Survey .
Rationale:	Re-use of another person's used needles/syringes increases the risk of transmission of human immunodeficiency virus (HIV) and hepatitis C virus (HCV). Needle-Syringe Programs are part of a comprehensive package of programs that aim to reduce the harmful consequences of injection drug use by facilitating access to new needles/syringes for people who inject drugs.
Indicator set:	Australian Health Performance Framework, 2020 Health! , Standard 13/10/2021

Collection and usage attributes

Computation description:	The proportion of people who inject drugs in contact with Needle-Syringe Programs who reported re-using someone else's used needles/syringes in the last month.						
Computation:	$100 \times (\text{Numerator} \div \text{Denominator})$						
Numerator:	The number of surveyed participants in contact with Needle-Syringe Programs, who report re-using someone else's used needles or syringes in the last month.						
Numerator data elements:	<table border="1"><tr><td>Data Element / Data Set</td></tr><tr><td>Surveyed participants in contact with Needle-Syringe Programs, who reported re-using someone else's used needles or syringes in the last month.</td></tr><tr><td>Data Source</td></tr><tr><td>Australian Needle and Syringe Program Survey (ANSPS)</td></tr><tr><td>Guide for use</td></tr><tr><td>Clients in contact with Needle-Syringe Programs are asked to participate in an anonymous survey over a two-week period in October each year.</td></tr></table>	Data Element / Data Set	Surveyed participants in contact with Needle-Syringe Programs, who reported re-using someone else's used needles or syringes in the last month.	Data Source	Australian Needle and Syringe Program Survey (ANSPS)	Guide for use	Clients in contact with Needle-Syringe Programs are asked to participate in an anonymous survey over a two-week period in October each year.
Data Element / Data Set							
Surveyed participants in contact with Needle-Syringe Programs, who reported re-using someone else's used needles or syringes in the last month.							
Data Source							
Australian Needle and Syringe Program Survey (ANSPS)							
Guide for use							
Clients in contact with Needle-Syringe Programs are asked to participate in an anonymous survey over a two-week period in October each year.							
Denominator:	The number of surveyed participants in contact with Needle-Syringe Programs who injected in the last month.						

Denominator data elements:

Data Element / Data Set

Surveyed participants in contact with Needle-Syringe Programs.

Data Source

[Australian Needle and Syringe Program Survey \(ANSPS\)](#)

Guide for use

Clients in contact with Needle-Syringe Programs are asked to participate in an anonymous survey over a two-week period in October each year.

Disaggregation:

Nationally, by state/territory.

Comments:

1. The Australian Needle Syringe Program Survey is a self-report survey conducted annually over a one to two-week period in October. All clients attending participating Needle and Syringe Programs are invited to complete a brief, anonymous questionnaire.
2. Estimates are calculated using data from annual reports. Trend data may not match previously published results.
3. The denominator is people who reported having injected in the last month; the numerator is people who reported having re-used someone else's used needles and syringes in the last month. Percentages exclude those who reported having injected in the last month but did not report their needle/syringe sharing frequency.
4. The Australian Needle Syringe Program Survey report refers to re-use of someone else's used needles and syringes as 'receptive sharing'.

Representational attributes

Representation class: Percentage

Data type: Real

Unit of measure: Person

Format: N[NN].N

Data source attributes

Data sources:

Data Source

[Australian Needle and Syringe Program Survey \(ANSPS\)](#)

Data custodian

The Kirby Institute, University of New South Wales

Accountability attributes

Methodology: Clients of Needle and Syringe Programs are invited to complete an anonymous survey over a two-week period in October.

Reporting requirements: Annual reporting of survey results as a requirement of funding from the Australian Government Department of Health.

Organisation responsible for providing data: Kirby Institute, University of New South Wales

Accountability: Kirby Institute, University of New South Wales

Other issues caveats: Survey response rate over recent years falls within the band of 41% to 48% of clients invited to participate.
