Primary Health Network—number of regular clients with an absolute cardiovascular disease risk assessment result recorded, total number N[NNNNNN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Number of regular clients with an absolute cardiovascular disease risk assessment result recorded
Synonymous names:	Number of regular clients with an absolute CVD risk assessment result recorded
METEOR identifier:	728882
Registration status:	Health! , Recorded 05/01/2021
Definition:	The total number of people who are considered to be regular clients of service providers within a Primary Health Network at a given point in time and who have an absolute cardiovascular disease (CVD) risk assessment result recorded.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Primary Health Network—number of regular clients with an absolute cardiovascular disease risk assessment result recorded
METEOR identifier:	728880
Registration status:	Health! , Recorded 05/01/2021
Definition:	The number of people who are considered to be regular clients of service providers within a Primary Health Network at a given point in time and who have an absolute cardiovascular disease (CVD) risk assessment result recorded
Object class:	Primary Health Network
Property:	Number of regular clients with an absolute cardiovascular disease risk assessment result recorded

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare.

Value domain attributes

Identifying and definitional attributes

Value domain:	Total number N[NNNNNN]
METEOR identifier:	506161
Registration status:	Health! , Standard 13/11/2014
Definition:	The total number.

Representational attributes

Representation class:	Total
Data type:	Number

Format: N[NNNNNN]

Maximum character length: 7

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Comments: Absolute CVD risk assessment is the probability, expressed as percentage, that a person may experience a cardiovascular event within a specified period. For example, the 5-year absolute risk of 15% means 'a 15% chance that the individual will experience a cardiovascular event within the next 5 years'. The calculation estimates a person's overall risk of CVD based on multiple risk factors as opposed to the traditional approaches using individual risk factors such as high cholesterol or high blood pressure.

Assessment of CVD risk based on multiple risk factors is more accurate due to the cumulative effect of CVD risk factors. In view of this additive predictive power, it is reasonable to expect that any prevention or management decisions based on this risk assessment tool should help improve CVD outcomes.

The definition of a regular client can vary depending on the context and/or collection in which the term is being applied, but generally involves a minimum number of visits to an organisation or agency or uses of a facility, occurring over a specific period of time. For example, in the primary health care context a regular client may be someone who has visited a particular primary health care provider 3 or more times in the last 2 years.
