Practice Incentives Program Quality Improvement: 06 Proportion of regular clients with COPD who were immunised against influenza, 2020

Exported from METEOR (AIHW's Metadata Online Registry)

Practice Incentives Program Quality Improvement: 06 Proportion of regular clients with COPD who were immunised against influenza, 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	QIM - 06 Proportion of regular clients with COPD who were immunised against influenza, 2020
METEOR identifier:	729797
Registration status:	Health!, Recorded 05/01/2021
Description:	Proportion of regular clients who are aged 15 years and over, are recorded as having chronic obstructive pulmonary disease (COPD) and were immunised against influenza in the previous 15 months.
Rationale:	People with COPD are considered to be at high risk of complications from influenza. Data from several studies also provide evidence that influenza vaccination has a clinically important protective effect on influenza-related COPD exacerbations, and probably an effect on the total number of exacerbations in COPD clients. The administration of influenza vaccine to persons at risk of complications is the single most important measure in preventing or attenuating influenza infection and preventing mortality. While best practice guidelines recommend annual immunisation, a 15-month interval allows for cases when a client decides to receive a vaccine earlier than recommended (e.g. from a pharmacy), or delay and wait for the release of an 'enhanced' vaccine.
Indicator set:	Practice Incentives Program Quality Improvement (PIP QI), 2020 Health!, Recorded 05/01/2021

Collection and usage attributes

Population group age from:	15
Population group age to:	65 and over
Computation description:	COPD: Chronic Obstructive Pulmonary Disease. Include any diagnosis of COPD. Proportion regular clients who are aged 15 years and over who are recorded as having COPD and are immunised against influenza.
	A person is immunised against influenza if they have received an influenza vaccine within the previous 15 months.
	Results arising from measurements conducted outside of the service, that are known by the service and included in the patient record, are included in the calculation of this indicator.
	Exclude clients from the calculation if they:
	- did not have the immunisation due to documented medical reasons (e.g. allergy), system reasons (vaccine not available) or patient reasons (e.g. refusal). - had results from measurements conducted outside of the service which were not available to the service; and had not visited the service in the previous 12 months.
Computation:	(Numerator ÷ Denominator) x 100
Numerator:	Number of regular clients who are aged 15 years and over who are recorded as having COPD and are immunised against influenza.
