DSS type:	Data Element Cluster
Scope:	The Primary Health Network female regular clients with a cervical screening recorded cluster is intended for use within the Practice incentives program eligible data set NBEDS (PIP EDS NBEDS). These data elements are used in conjunction with each other to describe the total number of female **regular clients** of service providers within a Primary Health Network with a cervical screening recorded, disaggregated by age range, and Indigenous status.

Collection and usage attributes

Guide for use:

The three data elements are used together to provide a count of female regular clients of service providers within a Primary Health Network with a cervical screening recorded, disaggregated by the various permutations of their age ranges and Indigenous status, as demonstrated below:

Indigenous Status	Age	Total
Indigenous Australian	25-34	N[NNNNNN]
Indigenous Australian	35-44	N[NNNNNN]
Indigenous Australian	45-54	N[NNNNNN]

| **Collection methods:** | Data is collected for every female **regular client**, aged 25 to 74 inclusive, who has not had a hysterectomy, and who has had a cervical screening (HPV test) within the previous 5 years. |

As opposed to other clusters collected in the PIP EDS NBEDS, the data should be disaggregated by age (derived from date of birth and taken as at the last day of the data collection period) as follows:

- 25-34 years
- 35-44 years
- 45-54 years
- 55-64 years
- 65-69 years
- 70-74 years

Other disaggregations as specified generally in the NBEDS.

| **Comments:** | The term 'female' is used in reference to a person's biological characteristics. See the Guide for use of Person—sex, code X for more information. |
