Primary Health Network—number of regular female clients

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	730433
Registration status:	Health!, Recorded 05/01/2021
Definition:	The number of female people who are considered to be regular clients of service providers within a Primary Health Network at a given point in time.

Object Class attributes

Identifying and definitional attributes

Object class:	Primary Health Network
Definition:	A Primary Health Network (PHN) is an administrative health region established to facilitate access to primary care services for patients, as well as co-ordinate with local hospitals in order to improve the overall operational efficiency of the network.

PHN organisations commission services and work directly with general practices (GPs) and other health care providers including hospitals and the broader community to ensure improved outcomes for patients across their region.

The term PHN can refer to either:

1. PHN organisation - A PHN organisation is responsible for identifying and addressing the primary health needs of communities in their PHN geographical region through strategic planning, commissioning services, supporting general practices and other health care providers, and supporting the integration of local health care services (DoH 2018).
2. PHN geographical area – A PHN geographical area is an administrative health region with boundaries that align with Local Hospital Networks (LHNs) or equivalents, or clusters of LHNs (DoH 2016).

Context:	Primary health care.
