Service provider setting origin code N

Identifying and definitional attributes

Metadata item type:	Value Domain
METEOR identifier:	730820
Registration status:	Health! , Standard 23/12/2020
Definition:	A code set representing the setting from which the primary service provider for a mental health episode of care originates.

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Admitted patient care
	2	Residential care
	3	Ambulatory care

Collection and usage attributes

Guide for use: Where there are multiple service providers for an episode of care, the service setting of the primary service provider should be reported. This data item is reported at the episode level and is associated to the primary service provider for the episode.

CODE 1 Admitted patient care

The setting of the service provider is considered to provide admitted patient care. This includes hospitals and units located within hospitals, including non-specialised mental health services. Excludes hospital outpatient clinics.

CODE 2 Residential care

The setting of the service provider is considered to be a [Residential mental health care service](#).

CODE 3 [Ambulatory care](#)

The setting of the service provider is considered to provide non-admitted ambulatory mental health care services. They include hospital outpatient clinics and non-hospital community mental health services, such as crisis or mobile assessment and treatment services, day programs, outreach services and consultation/liaison services (that are reported through the Community Mental Health Care National Minimum Data Set). This includes both specialised and non-specialised mental health services.

For further details, refer to the ABF MHC NBEDS 2020-21 Technical Specifications on the Independent Hospital Pricing Authority website.
