Elective surgery waiting list episode—clinical urgency, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Clinical urgency
METEOR identifier:	732423
Registration status:	Health! , Standard 05/02/2021 test , Qualified 20/03/2023
Definition:	A clinical assessment of the urgency with which a patient requires elective surgery , as represented by a code.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Elective surgery waiting list episode—clinical urgency
METEOR identifier:	598030
Registration status:	Health! , Standard 12/06/2015 Tasmanian Health , Standard 01/12/2016
Definition:	A clinical assessment of the urgency with which a patient requires elective surgery .
Context:	Elective surgery: Categorisation of waiting list patients by clinical urgency assists hospital management and clinicians in the prioritisation of their workloads. It gives health consumers a reasonable estimate of the maximum time they should expect to wait for care. Clinical urgency classification allows a meaningful measure of system performance to be calculated, namely the number or proportion of patients who wait for times in excess of the maximum desirable time limit for their urgency category (metadata item the overdue patient status).
Object class:	Elective surgery waiting list episode
Property:	Clinical urgency

Source and reference attributes

Submitting organisation:	National Health Information Standards and Statistics Committee

Value domain attributes

Identifying and definitional attributes

Value domain:	Clinical urgency code N
METEOR identifier:	598026
Registration status:	Health! , Standard 12/06/2015
Definition:	A code set representing the clinical assessment of the urgency with which a patient requires a procedure.

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Procedures that are clinically indicated within 30 days
	2	Procedures that are clinically indicated within 90 days
	3	Procedures that are clinically indicated within 365 days

Data element attributes

Collection and usage attributes

Guide for use:	Patients who require an elective procedure should be assigned an urgency category by the treating clinician. The urgency category should be: <ul style="list-style-type: none">• appropriate to the patient and their clinical situation• not influenced by the availability of hospital or surgeon resources.
-----------------------	---

Comments:	<p>The treating clinician is the clinician with responsibility for the patient at the time of urgency categorisation.</p> <p>The clinical situation of the patient is taken to encompass the patient's medical condition and the patient's life circumstances, including issues related to activity limitations, restrictions in participation in employment and other life situations, carer responsibilities and access to carer and other supports.</p> <p>A patient's classification may change if he or she undergoes clinical review during the waiting period. The need for clinical review varies with the patient's condition and is therefore at the discretion of the treating clinician. The waiting list information system should be able to record dates when the classification is changed (metadata item Elective care waiting list episode—category reassignment date, DDMMYYYY).</p>
