Pregnancy—estimated duration of pregnancy at the first antenatal care visit, total completed weeks N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Pregnancy duration at the first antenatal care visit
Synonymous names:	Estimated gestational age in completed weeks at first antenatal care visit
METEOR identifier:	732908
Registration status:	<u>Health!</u> , Standard 03/12/2020 <u>Indigenous</u> , Standard 14/07/2021
Definition:	The estimated duration of a pregnancy in total completed weeks on the day of the first antenatal care visit.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Pregnancy—estimated duration of pregnancy at the first antenatal care visit
METEOR identifier:	732905
Registration status:	<u>Health!</u> , Standard 03/12/2020 <u>Indigenous</u> , Standard 14/07/2021
Definition:	The estimated duration of a pregnancy on the day of the first antenatal care visit.
Object class:	Pregnancy
Property:	Estimated duration of pregnancy at the first antenatal care visit

Value domain attributes

Identifying and definitional attributes

Value domain:	Total weeks N[N]
METEOR identifier:	308220
Registration status:	<u>Health!</u> , Standard 02/12/2009 <u>Indigenous</u> , Standard 16/09/2014 <u>Tasmanian Health</u> , Standard 20/12/2016
Definition:	Total number of completed weeks.

Representational attributes

Representation class:	Total	
Data type:	Number	
Format:	N[N]	
Maximum character length:	2	
	Value	Meaning
Supplementary values:	99	Not stated/unknown

Data element attributes

Collection and usage attributes

Guide for use:	The day of the first antenatal care visit is the day of the first contact with a midwife, clinician, or other recognised health professional where antenatal care was provided. It does not include a visit where the sole purpose of contact is to confirm the pregnancy, or those contacts that occurred during the pregnancy that related solely to non-pregnancy related issues. It does not include a first contact after the onset of labour.
	Antenatal care visits are attributed to the pregnant female. The duration of a pregnancy on the day of the first antenatal care visit is the same as the best estimate of gestational age of the fetus or baby.
	There may be one or more revisions of pregnancy duration after the first antenatal care visit if a better estimate of gestational age of the fetus or baby becomes available. Revised estimates are not usually applied retrospectively in antenatal records. The best estimate of pregnancy duration is used to record the gestation at later antenatal care visits and to assign gestational age to the baby recorded at the time of birth.
	If gestational age has been revised, a similar revision will need to be applied to earlier recorded estimates of pregnancy duration. Alternatively the pregnancy duration on a specified day can be calculated from the gestational age of the baby at birth.
Collection methods:	To be collected at any time during the pregnancy or birth episode after the best estimate of gestational age has been determined.
	The method of data collection will usually be from health records of pregnancy and/or birth.
	The valid range of completed weeks for pregnancy duration at the first antenatal care visit is 3 to 46 weeks.
