# Sex

# Identifying and definitional attributes

Metadata item type: Glossary Item

METEOR identifier: 750030

Registration status: Health!, Standard 15/02/2022

Youth Justice, Standard 15/02/2022

**Definition:** Sex is understood in relation to sex characteristics, such as chromosomes,

hormones and reproductive organs.

Sex is often used interchangeably with **gender**, however they are distinct concepts

and it is important to differentiate between them.

# Collection and usage attributes

**Comments:** "A person's sex is based upon their sex characteristics, such as their

chromosomes, hormones and reproductive organs. While typically based upon the sex characteristics observed and recorded at birth or infancy, a person's reported sex can change over the course of their lifetime and may differ from their sex recorded at birth" (ABS 2021.)

"Sex refers to ... chromosomal, gonadal and anatomical characteristics" (AGD 2015.)

When comparing the concepts of sex and gender:

- Sex is understood in relation to sex characteristics. Sex recorded at birth refers to what was determined by sex characteristics observed at birth or in infancy
- Gender is about social and cultural differences in identity, expression and experience.

While they are related concepts, caution should be exercised when comparing counts for sex with those for gender.
