KPIs for Australian Public Mental Health Services: PI 05J – Average cost per acute mental health admitted patient day, 2022

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	MHS PI 05J: Average cost per acute mental health admitted patient day, 2022
METEOR identifier:	753253
Registration status:	Health! , Recorded 06/04/2022
Description:	Average cost of a patient day provided by state/territory acute admitted patient mental health care service units.

NOTE: This specification has been adapted from the indicator *Average cost per acute mental health admitted patient day, 2021– (Service level)* using terminology consistent with the National Health Data Dictionary. There are no technical differences in the calculation methodologies between the Service level version and the Jurisdictional level version of this indicator.

Rationale:	<ul style="list-style-type: none">• Efficient functioning of public acute psychiatric inpatient units is critical to ensuring finite funds are used effectively to deliver maximum community benefit.• Unit costs are a core feature of management level indicators in all industries. They are required to measure how well an organisation uses its resources in producing services and are fundamental to value for money judgements.• Acute admitted patient mental health care service units account for around three-quarters of the total costs of specialised mental health admitted patient care and around one-third of overall specialised mental health service costs.• 'Admitted patient day' is the 'intermediate product' for acute inpatient episodes and can be the focus activity aimed at improvements in technical efficiency.
-------------------	---

Collection and usage attributes

Computation description:	Coverage/Scope: State/territory acute admitted patient mental health care service units. Methodology: <ul style="list-style-type: none">• Reference period for the 2022 performance reporting: 2020–21.• All acute admitted patient mental health care service units reporting to the Mental Health Establishments National Minimum Data Set (NMDS) are in scope for this indicator, including short-stay units and emergency acute mental health admitted units.• Recurrent costs include costs directly attributable to the acute admitted patient mental health care service unit plus a proportional share of overhead costs (indirect expenditure). Cost data for this indicator are based on gross recurrent expenditure as compiled by state/territory data providers according to the specifications of the Mental Health Establishments NMDS. As such, it is subject to the concepts, definitions and costing methodology developed for the NMDS.• Categorisation of the admitted patient mental health care service unit is based on the principal purpose(s) of the program rather than the classification of individual consumers.
---------------------------------	---

Computation:	Numerator ÷ Denominator
---------------------	-------------------------

Numerator: Total recurrent expenditure on state/territory acute admitted patient mental health care service unit(s) within the reference period.

Numerator data elements:

Data Element / Data Set
Specialised mental health service unit total apportioned expenditure
NMDS/DSS
(derived from) Mental Health Establishments NMDS 2020–21

Data Element / Data Set
Establishment—accrued mental health care days, total N[N(7)]
NMDS / DSS
Mental health establishments NMDS 2020–21

Denominator: Number of patient days provided by state/territory acute admitted patient mental health care service unit(s) occurring within the reference period.

Denominator data elements:

Data Element / Data Set
Establishment—accrued mental health care days, total N[N(7)]
NMDS / DSS
Mental health establishments NMDS 2020–21

Disaggregation: Service variables: target population.

Consumer attributes: nil.

Disaggregation data elements:

Data Element / Data Set
Specialised mental health service—target population group, code N
NMDS / DSS
Mental health establishments NMDS 2020–21

Representational attributes

Representation class: Mean (average)
Data type: Monetary amount
Unit of measure: Currency
Format: N[NNN]

Indicator conceptual framework

Framework and dimensions: [Efficiency and sustainability](#)

Accountability attributes

Benchmark: State/territory level

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare
